Summary

Software engineer with 4+ years of experience owning production systems across embedded firmware, frontend and backend services, and edge-based infrastructure after formerly working as a paramedic. Led development of an end-to-end IoT platform deployed in real-world pilots, with primary ownership of CI/CD pipelines, Dockerized services, and Linux-based deployment environments. Primary expertise in TypeScript and JavaScript, with production experience using Go, Python, and C++ for backend services, automation, and embedded firmware. Experienced in customer communication, building device-to-edge data pipelines, real-time sensor services, and developer tooling that enables reliable iteration and deployment.

Skills

Languages: TypeScript, JavaScript, Go, Python, C++, Shell

Systems & Infrastructure: Linux, Docker (Compose), GitHub Actions, CI/CD, Make

Backend and APIs: REST APIs, WebSockets, OAuth, JWT, Node.js, Bun, Echo, Express

Frontend: React, React Native, Tailwind CSS, SVG, D3.js, Grafana

Data: SQL, NoSQL, InfluxDB, Redis

IoT & Embedded: EdgeX Foundry, Arduino, ESP32, MQTT, Bluetooth, WiFi

Work Experience

LATERAL.systems, Portland, OR

November 2023 - November 2025

Software Engineer (Contract)

- Led development with engineers and researchers at an early-stage AgTech startup to define technical direction and deliver a production-ready IoT platform.
- Owned infrastructure and deployment workflows, building Docker-based microservices and CI/CD pipelines with pull-based edge deployment, reducing deployment time ~60%.
- Developed C++ firmware for Arduino and ESP32 sensor platforms, implementing Bluetooth provisioning, MQTT-based device communication, and automated device discovery.
- Deployed the platform as an internal pilot and later delivered a customer-facing pilot supporting heterogeneous sensor suites.
- Produced system diagrams and technical documentation enabling knowledge transfer and continued development.

STERIS, Hartford, CT

August 2018 - March 2022

Field Service Representative

- Owned customer relationships across a regional healthcare territory, serving as the primary point of contact for service and technical needs.
- Proactively identified latent system vulnerabilities before customer detection, converting technical risks into qualified sales leads for equipment upgrades.
- Led discovery-driven conversations with clinical and administrative decision makers.
- Partnered with account managers to identify renewal, upgrade, and expansion opportunities.

Community & Projects

CodePDX - Civic Tech Volunteer:

- Designed and developed a React-based organization website, improving onboarding and increasing contributor participation while collaborating on community-driven open-source projects.

trailscale:

- Cross-platform backpacking inventory and weight management tool built with TypeScript and React Native. Built drill-down data visualizations, offline-friendly data modeling, and authenticated user profiles with shareable configurations.
